

Assignment 1- Qianru Liao

My target audience is researchers interested in animal movements and how the encounter between individuals could affect their home ranges and following behaviors.

They encounter... and away from each other.

My 6-word story makes sense because I create an interaction situation between two animal individuals and describe how both individuals react to their encounters. And my individuals would be curious about the mechanism under the phenomenon and start to think about possible reasons (territory defense, self-avoidance, etc .)
