III- Research

A. Areas of professional expertise

My primary research interests are atmospheric deposition, terrestrial nutrient processing and export, aquatic nutrient cycling, and primary productivity. I have concentrated primarily on terrestrial and aquatic systems in the basins of Atlantic estuaries and in the Amazon River floodplain, but I have also investigated periphyton and macrophytes as well as

the benthic microflora of carbonate sands on coral reefs. Processes examined are atmospheric deposition, historical land use changes, stream chemistry, nutrient processing in streams and estuaries, and primary productivity. Common tools are GIS, remote sensing, water chemistry monitoring, and hydrochemical modeling.
